

# HCA Central “Garage” sale

Here is how this works....

Unless I put a price on something or say “make me an offer”, anything you want is \$10 per item and you pay the postage. If you want something and the price seems wrong, tell me and we can negotiate.

Just to be clear you pay postage for anything I ship. I ship USPS.

I have NOT tested everything here but they all worked at one time and they probably still do. If you happen to get something where it doesn't work, then I'll refund what you paid for the items plus ½ of the postage.

Most things that follow have links to a larger resolution image. Some have pictures included but a bigger resolution image can be found by the link.

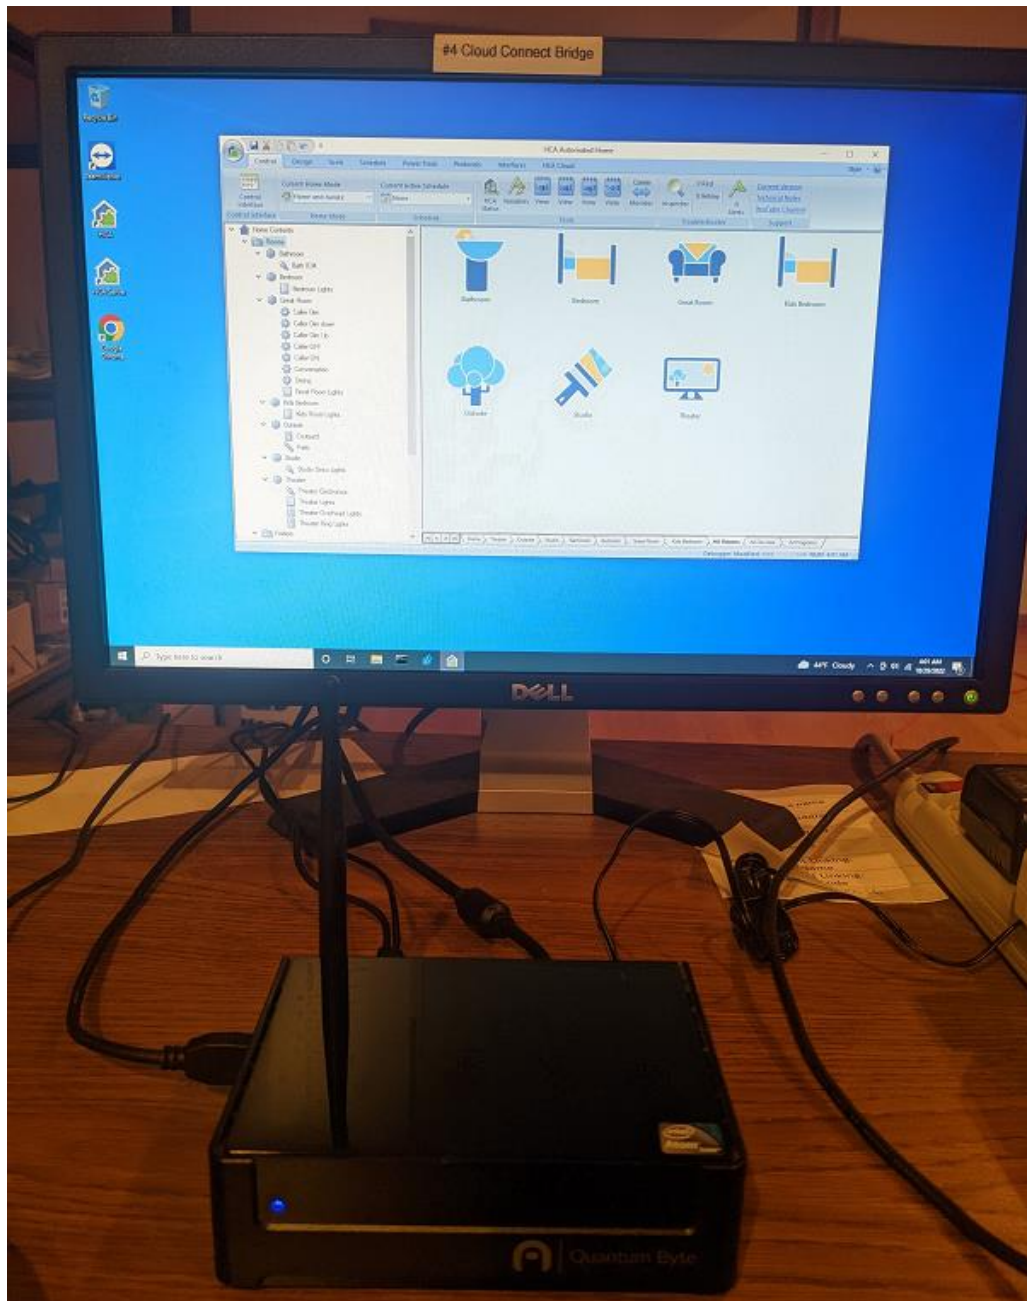

Some of the Insteon stuff has multiple items in the same picture. **Insteon stuff is \$10 per item not per picture.** If you want only one item in the picture you will have to tell me what you want.

I'm not going to devote much time to this – only don't want not to have to “bin” a bunch of stuff - so I will let this run for 2 weeks, then box and ship everything that was wanted and paid for. Bottom line, unless you really need something quick, you probably should be ready to wait for a few weeks until it arrives.

**GREAT DEAL:** A few weeks back I offered small footprint computers for sale that I could get at a good price. That deal is over. But I do have **a few** of the older model machines. I used them for testing. I ran my home HCA server on the same model for years. They are good performers.

They have 2GB ram and about 11GB disk free with HCA installed which is fine for HCA and Windows updates. Also VGA and HDMI, 3 USB ports, wireless or wired network. They have Windows 10 (but not Windows LTSC) and all updates – Windows 11 not possible - and HCA 17.0.48 pre-installed. They are \$120 each plus postage. If you want more info or have questions, just drop me an email.

**If you are using pre-version 17 you would be crazy to pass this up as the upgrade for just the software is \$75 and for about double that you get HCA 17 and a computer (no monitor, of course).**

Good stuff – new not used.

TP Link light bulb. Price \$10
